EDUCATION

Bachelor in Computer Science and Engineering

Gokaraju Rangaraju Institute Of Educational Technology • Hyderabad,Telangana • 2027 • 9.2

Intermediate Majoring in Mathematics, Physics and Chemistry

Sri Chaitanya Junior College • Kukatpally Housing Board • 2023 • 98.6%

High School

Vaishnavi High School • Shapur Nagar • 2021 • 100%

SKILLS

Technical Skills: Machine Learning, Deep Learning, HTML, CSS, JS, AngularJS, SQL, C, Java, C#(.NET), R

Frameworks: TensorFlow, Flask, Plotly, Pandas, scikit-learn

Languages: English, Hindi, Telugu(Native)

Soft Skills: Effective Communication, Leadership, Team work, Problem Solving

PROJECT

Stock Price Predictor

Microsoft Edunet • github.com/solomon-5A5/stock-price-predictor • May 2025 – June 2025

- Engineered a stock price prediction system using LSTM with 60-day historical data to forecast next-day closing prices. Collected 5 years of stock data via yFinance and preprocessed it using MinMaxScaler with lookback sequencing. Built and trained a TensorFlow/Keras LSTM model, saving both the model and scaler for reuse. Developed a Flask backend to handle predictions and a Bootstrap + Plotly frontend for interactive visualization. Integrated, tested, and deployed the full-stack web app with GitHub version control and real-time usability features.

Health Care E-commerce Website

Gokaraju Rangaraju Institute Of Educational Technology • github.com/solomon-5A5/HealthHive • January 2025 – April 2025

- Developed a dynamic e-commerce platform for medicine sales with user-friendly navigation, product search, and category filters. Integrated secure payment gateways and user account features for order tracking, purchase history, and personalized recommendations. Implemented an AI-powered chatbot via API to assist users with product queries and tailored suggestions in real time. Built an efficient order management system to handle inventory, transactions, and customer notifications seamlessly. Used HTML, CSS, JavaScript, AngularJS, and SQL to launch a healthcare platform that boosted monthly sales by 30%.

Employee Management System

Gokaraju Rangaraju Institute of Educational Technology

- Developed an Employee Management System using SQL to manage employee, department, salary, and attendance data across relational tables. Implemented features for storing detailed employee info, assigning departments, and tracking salaries with support for promotions and bonuses. Built an attendance module to monitor workdays, holidays, and absences for each employee efficiently. Created advanced SQL queries to generate reports on department-wise headcount, salary distribution, and employee tenure. Ensured data accuracy and consistency using primary keys, foreign keys, and constraints, improving HR operations.
